

Module handbook

for the study programme

Data Science (M.Sc.)

Summer semester 2022

Notes:

Further information on the individual study programs (study and examination regulations, student advisory, etc.) can be found at www.math.fau.de/studium.

- For updates on courses offered in this and the next semester, please visit the [UnivIS portal](#).
- Modules of a study program are defined in the respective examination regulations. This collection includes all modules offered by the Department of Computer Science, the Department of Data Science, and the Department of Mathematics for this study programme.
- Modules from application subjects and technical qualifications will not explicitly be mentioned in this handbook.
- Please also refer to the module catalogues to get an overview of all modules which are offered for this study programme.
- This module handbook was handcrafted in dedication by Jutta Zintchenko and Daniel Tenbrinck.

Descriptions to the following modules taught in **English** can be found in the module handbook of the M.Sc. study programme Computational and Applied Mathematics (CAM):

- Practical Course: Modeling, Simulation, Optimization (MoSi)
- Mathematische Grundlagen zu Künstliche Intelligenz, Neuronale Netze und Data Analytics II (MathKINN II)

Descriptions to the following modules taught in **German** can be found in the respective module handbook of the M.Sc. study programmes Mathematics and Economics and Mathematics:

- Projektseminar Optimierung (ProO)

Table of Content

English modules	5
Advanced Solution Techniques (AdSolTech).....	6
Artificial Intelligence II (KI II).....	8
CML: Control, Machine Learning and Numerics (CML).....	10
Computational Complexity (CC).....	12
Data Structure Engineering (DSE).....	14
Discrete Optimization II (DiskOpt II).....	15
Introduction to Material and Shape Optimization (MSOpt).....	17
Introduction to Random Matrix Theory (RMT).....	19
Knowledge Discovery in Databases with Exercises (KKDmUe).....	21
Lab Course Machine Learning in Signal Processing (LabMLISP).....	23
Mathematics of Learning (MoL).....	25
Numerical Aspects of Linear and Integer Programming (NALIP).....	26
Quality of Service in Communications (DKS).....	27
Partial Differential Equations Based Image Processing (PDE based Image Processing).....	29
Pattern Analysis (PA).....	30
Simulation and Modeling 2 (SaM 2).....	32
Simulation and Scientific Computing 2 (SiWiR2).....	34
German modules	36
Einführung in die Darstellungstheorie (EDT).....	37
Kolloquiumsvorlesung Digitale Souveränität (KvDS).....	39
Lie-Gruppen (LieG).....	41
Masterseminar (MaSe).....	43
Mathematische Statistik (MS).....	44
Partielle Differentialgleichungen II (PDG II).....	45
Wahrscheinlichkeitstheorie (WT).....	47

English modules

1	Module name	Advanced Solution Techniques (AdSolTech)	5 ECTS
2	Courses/lectures	Lectures (2 SWS) Exercises (1 SWS)	
3	Lectures	Dr. Stefan Metzger stefan.metzger@fau.de	
4	Module coordinator	Prof. Dr. Eberhard Bänsch baensch@math.fau.de	
5	Content	This course covers: <ul style="list-style-type: none"> • Krylov subspace methods for large non-symmetric systems of equations • Multilevel methods, especially multigrid (MG) methods, nested and non-nested grid hierarchies • Parallel numerics, especially domain decomposition methods • Inexact Newton/Newton-Krylov methods for discretized nonlinear partial differential equations • Preconditioning and operator-splitting methods 	
6	Learning objectives and skills	Students <ul style="list-style-type: none"> • are able to design application-specific own MG algorithms with the theory of multigrid methods and decide for which problems the MG algorithm is suitable to solve large linear systems of equations, • are able to solve sparse nonlinear/non-symmetric systems of equations with modern methods (also with parallel computers), • are able to develop under critical assessment complete and efficient methods for application-orientated problems. 	
7	Prerequisites	Recommended: Advanced Discretization Techniques	
8	Integration into curriculum	in 2nd semester	
9	Module compatibility	Mandatory elective module for: <ul style="list-style-type: none"> • M.Sc. Computational and Applied Mathematics • M.Sc. Data Science • M.Sc. Mathematics • M.Sc. Industrial Mathematics • M.Sc. Economics and Mathematics 	
10	Method of examination	Oral exam (15 min.)	
11	Grading Procedure	Oral exam (100 %)	
12	Module frequency	Summer semester (annually)	
13	Workload	Workload: 150h distributed as: <ul style="list-style-type: none"> • Contact hours: 112.5h • Independent study: 37.5h 	
14	Module duration	One semester	
15	Teaching and examination language	English	

16	Recommended reading	<ul style="list-style-type: none">• Quarteroni & A. Valli: Numerical Approximation of Partial Differential Equations• P. Knabner & L. Angermann: Numerical Methods for Elliptic and Parabolic Differential Equations• Further literature and scientific publications are announced during the lectures
----	----------------------------	--

1	Module name	Artificial Intelligence II (KI II)	7.5 ECTS
2	Courses/lectures	Lectures (4 SWS) Exercises (2 SWS)	
3	Lecturers	Prof. Dr. Michael Kohlhase michael.kohlhase@fau.de	
4	Module coordinator	Prof. Dr. Michael Kohlhase michael.kohlhase@fau.de	
5	Content	This course covers the foundations of Artificial Intelligence (AI), in particular reasoning under uncertainty, machine learning and (if there is time) natural language processing . This course builds on the course Artificial Intelligence I from the preceding winter semester and continues it.	
6	Learning objectives and skills	<p>Technical, Learning, and Method Competencies:</p> <ul style="list-style-type: none"> • Knowledge: The students learn foundational representations and algorithms in AI. • Application: The concepts learned are applied to examples from the real world (homeworks) • Analysis: By modeling human cognitive abilities, students learn to assess and understand human intelligence better. <p>Social Competencies:</p> <ul style="list-style-type: none"> • Students work in small groups to solve a machine learning challenge/competition. 	
7	Prerequisites	Artificial Intelligence I	
8	Integration into curriculum	in 2nd semester	
9	Module compatibility	Mandatory elective module for: <ul style="list-style-type: none"> • M.Sc. Artificial Intelligence • B.Sc. Computational Engineering • B.Sc./M.Sc. Computer Science • B.Sc./M.Sc. Data Science • M.Sc. International Information Systems • B.Sc. Mathematics • B.Sc./M.Sc. Mechatronics • M.Sc. Medical Technology • B.Sc. Business Informatics 	
10	Method of examination	Written exam (90 min.)	
11	Grading Procedure	Written exam (100%); Up to 10% bonus points can be achieved by completing the exercise sheets.	
12	Module frequency	Summer semester (annually)	
13	Workload	Workload: 225h distributed as: <ul style="list-style-type: none"> • Contact hours: 90h • Independent study: 135h 	
14	Module duration	One semester	
15	Teaching and examination language	English	

16	Recommended reading	The course follows the following textbook: Stuart Russell and Peter Norvig: Artificial Intelligence: A Modern Approach. Prentice Hall, 3rd edition, 2009 ISBN: 978-3-8273-7089-1
----	----------------------------	---

1	Module name	CML: Control, Machine Learning and Numerics (CML)	10 ECTS
2	Courses/lectures	Lectures (2 SWS) Practical exercises (3 SWS)	
3	Lecturers	Prof. Dr. Enrique Zuazua enrique.zuazua@fau.de Dr. Yongcun Song yongcun.song@fau.de	
4	Module coordinator	Prof. Dr. Enrique Zuazua enrique.zuazua@fau.de	
5	Content	This course covers: <ul style="list-style-type: none"> several topics related to the control of Ordinary Differential Equations (ODE) and Partial Differential Equations (PDE), including controllability, observability, and some of the most fundamental work that has been done in the subject in recent years. an introduction to Machine Learning, focusing mainly on the use of control techniques for the analysis of Deep Neural Networks as a tool to address, for instance, the problem of Supervised Learning. some classical computational techniques related to the control of ODE and PDE, and machine learning. 	
6	Learning objectives and skills	Students are able to: <ul style="list-style-type: none"> understand some basic theory on control and machine learning. learn about recent advances on control and machine learning. implement some computational techniques using their own or specified software and critically evaluate the results, set out their approaches and results in a comprehensible and convincing manner, making use of appropriate presentation techniques. 	
7	Prerequisites	Basic knowledge of calculus, linear algebra, ODE and PDE. Familiarity with scientific computing is helpful.	
8	Integration into curriculum	in 2nd semester	
9	Module compatibility	Mandatory elective module for: <ul style="list-style-type: none"> M.Sc. Computational and Applied Mathematics M.Sc. Data Science 	
10	Method of examination	Project work with presentation and report	
11	Grading Procedure	<ul style="list-style-type: none"> Presentation (50%) Report (50%) 	
12	Module frequency	Summer semester (annually)	
13	Workload	Workload: 300h distributed as: <ul style="list-style-type: none"> Contact hours: 75h Independent study: 225h 	
14	Module duration	One semester	

15	Teaching and examination language	English

1	Module name	Computational Complexity (CC)	5 ECTS
2	Courses/lectures	Lectures (2 SWS) Exercises (1 SWS)	
3	Lecturers	Prof. Dr. Yiannis Giannakopoulos yiannis.giannakopoulos@fau.de	
4	Module coordinator	Prof. Dr. Yiannis Giannakopoulos yiannis.giannakopoulos@fau.de	
5	Content	<p>This course covers:</p> <ul style="list-style-type: none"> • P, NP, and NP-completeness • Complexity classes and reductions • Boolean circuits • The polynomial-time hierarchy • Space complexity • Randomized computation • Counting complexity • Introduction to the PCP theorem and hardness of approximation • Average-case complexity 	
6	Learning objectives and skills	<p>Upon successful completion of the module, students are able to:</p> <ul style="list-style-type: none"> • have a rigorous understand of the concept of computation and its formal limitations • have knowledge of the fundamental complexity classes (including P, NP and PSPACE) • understand the notion of completeness and are able to design and understand reductions between these classes • are exposed to various formal computation models, including Boolean circuits and randomness 	
7	Prerequisites	Undergraduate-level course in algorithms and/or discrete optimization. Basic knowledge of analysis, linear algebra, and probability.	
8	Integration into curriculum	from 1st semester	
9	Module compatibility	<p>Mandatory elective module for:</p> <ul style="list-style-type: none"> • M.Sc. Artificial Intelligence • M.Sc. Computational and Applied Mathematics • B.Sc. Computer Science • M. Sc. Data Science • M. Sc. Mathematics • M. Sc. Economics and Mathematics 	
10	Method of examination	Oral exam (30 min.)	
11	Grading Procedure	Oral exam (100%)	
12	Module frequency	Annually (summer semester)	
13	Workload	<p>Workload: 150h distributed as:</p> <ul style="list-style-type: none"> • Contact hours: 45h • Independent study: 105h 	

14	Module duration	One semester
15	Teaching and examination language	English
16	Recommended reading	<ul style="list-style-type: none"> • Oded Goldreich. "Computational Complexity: A Conceptual Perspective". Cambridge University Press, 2008. • Sanjeev Arora and Boaz Barak. "Computational Complexity: A Modern Approach". Cambridge University Press, 2009 • Christos H. Papadimitriou. "Computational Complexity". Addison-Wesley, 1994.

1	Module name	Data Structure Engineering (DSE)	5 ECTS
2	Courses/lectures	Lectures (2 SWS) Exercises (2 SWS)	
3	Lecturers	Prof. Dr. Viktor Leis viktor.leis@fau.de	
4	Module coordinator	Prof. Dr. Viktor Leis viktor.leis@fau.de	
5	Content	<p>Data structures are often crucial for overall performance. On modern hardware a low asymptotic complexity does not guarantee good performance. To achieve good performance in practice, one must also take features of today's processors, such as caches and the abundant parallelism, into account when designing and implementing data structures.</p> <p>This course teaches principles for engineering of high-performance data structures on modern hardware. It first introduces the necessary hardware background, before studying different variants of data structures such as hash tables, search trees, and tries. Finally, a number of synchronization protocols for concurrent access are presented.</p>	
6	Learning objectives and skills	Students can implement efficient data structures. They are capable of designing custom, domain-specific data structure variants and of synchronizing them for multi-core processors in a scalable fashion.	
7	Prerequisites	Recommended: <ul style="list-style-type: none"> Algorithms and Data Structures System programming Good programming skills in C or C++ 	
8	Integration into curriculum	from 1st semester	
9	Module compatibility	Mandatory elective module in: <ul style="list-style-type: none"> M.Sc. Computer Science M.Sc. Data Science M.Sc. Information and Communication Technology 	
10	Method of examination	Oral exam (30 min.)	
11	Grading Procedure	Oral exam (100%)	
12	Module frequency	Summer semester (annually)	
13	Workload	Workload: 150h distributed as: <ul style="list-style-type: none"> Contact hours: 60h Independent study: 90h 	
14	Module duration	One semester	
15	Teaching and examination language	English	
16	Recommended reading		

1	Module name	Discrete Optimization II (DiskOpt II)	5 ECTS
2	Courses/lectures	Lectures (2 SWS) Exercises (1 SWS)	
3	Lecturers	Prof. Dr. Alexander Martin alexander.martin@fau.de	
4	Module coordinator	Prof. Dr. Alexander Martin alexander.martin@fau.de	
5	Content	In this lecture, we cover theoretical aspects and solution strategies for difficult integer and mixed-integer optimization problems. First, we show the equivalence between separation and optimization. Then, we present solution strategies for large-scale optimization problems, e.g., decomposition methods and approximation algorithms. Finally, we deal with conditions for the existence of integer polyhedra. We also discuss applications for example from the fields of engineering, finance, energy or public transport.	
6	Learning objectives and skills	Students are able to: <ul style="list-style-type: none"> • use basic terms of discrete optimization • model real-world discrete optimization problems, determine their complexity and solve them with appropriate mathematical methods. 	
7	Prerequisites	Recommended: <ul style="list-style-type: none"> • Knowledge in linear and combinatorial optimization • Discrete optimization I 	
8	Integration into curriculum	in 2nd semester	
9	Module compatibility	Mandatory elective module in: <ul style="list-style-type: none"> • M.Sc. Artificial Intelligence • M.Sc. Computational and Applied Mathematics • B.Sc./M.Sc. Computer Science • M.Sc. Data Science • M.Sc. Economics and Mathematics • M.Sc. Industrial Mathematics • M.Sc. Mathematics 	
10	Method of examination	Oral exam (20 min.)	
11	Grading Procedure	Oral exam (100%)	
12	Module frequency	Summer semester (annually)	
13	Workload	Workload: 150h distributed as: <ul style="list-style-type: none"> • Contact hours: 45h • Independent study: 105h

1	Module name	Introduction to Random Matrix Theory (RMT)	5 ECTS
2	Courses/lectures	Lectures (2 SWS) Exercises (1 SWS)	
3	Lecturers	Prof. Dr. Thorsten Neuschel neuschel@math.fau.de	
4	Module coordinator	Prof. Dr. Thorsten Neuschel neuschel@math.fau.de	
5	Content	The course introduces fundamental concepts of the theory by covering <ul style="list-style-type: none"> • Wigner's semicircle law for self-adjoint random matrices • Method of moments and the corresponding combinatorics • Convergence of random spectral measures • Distribution of eigenvalues of Gaussian orthogonal and unitary ensembles 	
6	Learning objectives and skills	The students <ul style="list-style-type: none"> • understand and explain basic principles for the spectral behavior of high-dimensional random matrices • learn the application of the method of moments • bring together knowledge from Analysis, Linear Algebra, Measure Theory and Probability to describe the spectral properties of the most important classes of random matrices 	
	Prerequisites	It is recommended to have a background in Analysis, Linear Algebra, Measure Theory and Probability.	
8	Integration into curriculum	1st to 3rd semester	
9	Module compatibility	Mandatory elective module in <ul style="list-style-type: none"> • M.Sc. Data Science • M.Sc. Mathematik • M.Sc. Technomathematik • M.Sc. Wirtschaftsmathematik 	
10	Method of examination	Oral exam (approx. 15-20 Minutes) or written exam (120 Minutes), will be decided at the beginning	
11	Grading Procedure	Oral exam (100%) or written exam (100%)	
12	Module frequency	Summer semester	
13	Workload	Workload 150 h distributed as: <ul style="list-style-type: none"> • Contact hours: 45h • Independent study: 105h 	
14	Module duration	One semester	
15	Teaching and examination language	English	

16	Recommended reading	Anderson, Guionnet, Zeitouni: An Introduction to Random Matrices, Cambridge University Press.
----	----------------------------	---

1	Module name	Knowledge Discovery in Databases with Exercises (KKDmUe)	5 ECTS
2	Courses/lectures	Lectures (2 SWS) Exercises (2 SWS)	
3	Lecturers	M.Sc. Dominik Probst, M.Sc. Melanie Bianca Sigl dominik.probst@fau.de , melanie.sigl@fau.de	
4	Module coordinator	Prof. Dr. Richard Lenz richard.lenz@fau.de	
5	Content	<p>This course covers:</p> <p>Theoretical knowledge on:</p> <ul style="list-style-type: none"> • Why data mining? • What is data mining? • A multi-dimensional view of data mining • What kinds of data can be mined? • What kinds of patterns can be mined? • What technologies are used? • What kinds of applications are targeted? • Major issues in data mining • A brief history of data mining <p>Practical exercises on:</p> <ul style="list-style-type: none"> • Introduction to Pandas & scikit-learn • Data analysis & data preprocessing • Frequent Pattern • Classification • Clustering • Outliers 	
6	Learning objectives and skills	<p>The students:</p> <ul style="list-style-type: none"> • know the typical KDD process; • know procedures for the preparation of data for data mining; • know the definition of distance or similarity functions for the different kinds of attributes; • define distance and similarity functions for a particular dataset; • check attributes of a dataset for their meaning with reference to an analysis and transform attribute values accordingly, if required. • know how a typical data warehouse is structured; • are familiar with the principle of the Apriori algorithm for the identification of frequent itemsets; • know the FP-growth algorithm for a faster identification of frequent itemsets; • present the definitions of support and confidence for association rules; • describe the construction of association rules based on frequent itemsets; • are capable of describing the course of action in classification tasks; • present the construction of a decision tree based on a training dataset; • present the principle of Bayes' classification; • enumerate different clustering procedures; • describe the steps of k-means clustering; • know the different kinds of outliers. • are able to practically apply the various steps of a KDD process. 	

7	Prerequisites	
8	Integration into curriculum	in 2nd semester
9	Module compatibility	Mandatory elective module in: <ul style="list-style-type: none"> • M.Sc. Computer Science • M.Sc. Data Science
10	Method of examination	Written exam (90 min.)
11	Grading Procedure	Written exam (100%)
12	Module frequency	Summer semester (annually)
13	Workload	Workload: 150h distributed as: <ul style="list-style-type: none"> • Contact hours: 60h • Independent study: 90h

16	Recommended reading	<p>The lecture is based on the following book:</p> <ul style="list-style-type: none"> • J. Han, M. Kamber, and J. Pei, Data Mining: Concepts and Techniques, 3rd. San Francisco, CA, USA: Morgan Kaufmann Publishers Inc., 2011, ISBN: 0123814790 <p>Also interesting and related textbooks are:</p> <ul style="list-style-type: none"> • A. Géron, Hands-on machine learning with Scikit-Learn and TensorFlow: concepts, tools, and techniques to build intelligent systems, 2nd ed. O'Reilly Media, 2017, ISBN: 978-1491962299 • H. Du, Data Mining Techniques and Applications: An Introduction. Cengage Learning EMEA, May 2010, p. 336, ISBN: 978-1844808915 • I. H. Witten, E. Frank, M. A. Hall, et al., Data Mining, Fourth Edition: Practical Machine Learning Tools and Techniques, 4th. San Francisco, CA, USA: Morgan Kaufmann Publishers Inc., 2016, ISBN: 0128042915

1	Module name	Lab Course Machine Learning in Signal Processing (LabMLISP)	2.5 ECTS
2	Courses/lectures	Practical sessions (4 SWS)	
3	Lecturers	M.Sc. Kamal Gopikrishnan Nambiar kamal.nambiar@fau.de	
4	Module coordinator	Prof. Dr. André Kaup andre.kaup@fau.de	
5	Content	<p>This is an advanced-level lab course in machine learning. Imagine a car driving on an autobahn in automatic mode. Among other things, the car needs to steer itself to keep driving in its lane. To accomplish this, the central problem is to detect the road-lane markings. These are the white solid or dashed lines that are drawn on each side of the lane. The standard modern approach to solve this type of problem is to take a large dataset of labeled examples and train a deep neural network model to accomplish the task. This is how car and pedestrian detection algorithms are developed. The difficulty with the road-lane markings is that there is no labeled dataset of them and creating such a dataset would be very expensive.</p> <p>In this lab course we will solve this problem using transfer learning and mathematical modeling:</p> <ul style="list-style-type: none"> • Create cartoon-like artificial images of a road with known locations for the lane markings. • Train deep neural networks on these artificial images with heavy data augmentations that mimic real-world images. • Create a dataset of unlabeled real-life videos by downloading and organizing examples from YouTube. • Create a machine learning pipeline for working with these videos efficiently. • Apply the neural network that has been trained on artificial data to real-world videos. • Analyze the quality of results produced by the network. • Use mathematical modeling to correct the outputs of the network. • Retrain the network on the dataset composed of the corrected outputs. • Measure and analyze the quality of the results. <p>The software will be written in Python using the JupyterLab development framework. Access to modern GPU servers will be provided. The best students will have the opportunity to contribute to the creation of a state-of-the-art lane detection system for self-driving cars during or after the course.</p>	
6	Learning objectives and skills	<p>Students are able to:</p> <ul style="list-style-type: none"> • Independently design machine learning pipelines to solve complex problems in artificial intelligence. • Choose appropriate algorithms for the problem at hand. • Use standard packages for machine learning in Python: NumPy, scikit-learn, PyTorch. • Debug and calibrate machine learning algorithms. Develop modification to the standard algorithms as appropriate to the problem at hand. • Explain the theoretical aspects of deep learning. 	
7	Prerequisites	Knowledge of Python programming language is required. Basic theoretical knowledge in machine learning is assumed: consider taking the Machine Learning in Signal Processing (MLISP) course.	

8	Integration into curriculum	from 1st semester
9	Module compatibility	Mandatory elective module in: <ul style="list-style-type: none"> • M.Sc. Advanced Signal Processing & Communications Engineering • M.Sc. Communications and Multimedia Engineering • M.Sc. Data Science • M.Sc. Information and Communication Technology • M.Sc. Mechatronics
10	Method of examination	Students must present a: <ul style="list-style-type: none"> • Well-documented algorithm that detects lanes on a driving video. • Video demonstration showing the functioning of the algorithm. • Short report (up to 3 pages).
11	Grading Procedure	Ungraded
12	Module frequency	Summer and winter semester

1	Module name	Pattern Analysis (PA)	5 ECTS
2	Courses/lectures	Lectures (3 SWS) Exercises (1 SWS)	
3	Lecturers	PD Dr. Christian Riess christian.riess@fau.de	
4	Module coordinator	PD Dr. Christian Riess christian.riess@fau.de	
5	Content	<p>This module introduces the design of pattern analysis systems as well as the corresponding fundamental mathematical methods. The topics comprise:</p> <ul style="list-style-type: none"> • clustering methods: soft and hard clustering • classification and regression trees and forests • parametric and non-parametric density estimation: maximum-likelihood (ML) estimation, maximum-a-posteriori (MAP) estimation, histograms, Parzen estimation, relationship between folded histograms and Parzen estimation, adaptive binning with regression trees • mean shift algorithm: local maximization using gradient ascent for non-parametric probability density functions, application of the mean shift algorithm for clustering, color quantization, object tracking • linear and non-linear manifold learning: curse of dimensionality, various dimensionality reduction methods: principal component analysis (PCA), multidimensional scaling (MDS), isomaps, Laplacian eigenmaps • Gaussian mixture models (GMM) and hidden Markov models (HMM): expectation maximization algorithm, parameter estimation, computation of the optimal sequence of states/Viterbi algorithm, forward-backward algorithm, scaling • Markov random fields (MRF): definition, probabilities on undirected graphs, clique potentials, Hammersley-Clifford theorem, inference via Gibbs sampling and graph cuts 	
6	Learning objectives and skills	<p>The students are able to:</p> <ul style="list-style-type: none"> • explain the discussed methods for classification, prediction, and analysis of patterns, • compare and analyze methods for manifold learning and select a suited method for a given set of features and a given problem, • compare and analyze methods for probability density estimation and select a suited method for a given set of features and a given problem, • apply non-parametric probability density estimation to pattern analysis problems, • apply dimensionality reduction techniques to high-dimensional feature spaces, • explain statistic modeling of feature sets and sequences of features, • explain statistic modeling of statistical dependencies, • implement presented methods in Python, • supplement autonomously the mathematical foundations of the presented methods by self-guided study of the literature, • discuss the social impact of applications of pattern analysis solutions. 	
7	Prerequisites	Prior participation in the course "Pattern Recognition" is strongly recommended.	

8	Integration into curriculum	in 2nd semester
9	Module compatibility	Mandatory elective module in: <ul style="list-style-type: none"> • M.Sc. Advanced Optical Technologies • M.Sc. Advanced Signal Processing & Communications Engineering • M.Sc. Artificial Intelligence • M.Sc. Communications and Multimedia Engineering • M.Sc. Computational Engineering • M.Sc. Computer Science • M.Sc. Data Science • M.Sc. Information and Communication Technology • M.Sc. International Information Systems • B.Sc./M.Sc. Mechatronics • M.Sc. Medical technology

16	Recommended reading	<ul style="list-style-type: none"> • C. Bishop: Pattern Recognition and Machine Learning, Springer Verlag, Heidelberg, 2006 • T. Hastie, R. Tibshirani und J. Friedman: The Elements of Statistical Learning, 2nd Edition, Springer Verlag, 2009 • A. Criminisi and J. Shotton: Decision Forests for Computer Vision and Medical Image Analysis, Springer, 2013

1	Module name	Simulation and Modeling 2 (SaM 2)	7.5 ECTS
2	Courses/lectures	Lectures (2 SWS) Exercises (2 SWS)	
3	Lecturers	Prof. Dr.-Ing. Reinhard German reinhard.german@fau.de	
4	Module coordinator	Prof. Dr.-Ing. Reinhard German reinhard.german@fau.de	
5	Content	<p>The class is project-oriented: participants conduct one larger simulation project in a team (3-4 students). The simulation project covers all typical phases including project planning, requirements analysis, data collection, input modeling, conceptual modeling, verification, validation, simulation runs, output analysis, result presentation and documentation. The lecture covers:</p> <ul style="list-style-type: none"> • simulation project management, presentation, and documentation techniques • detailed simulation project case studies, • advanced topics in simulation such as variance reduction techniques, rare event simulation, parallel and distributed simulation. <p>The project teams also present their results in the lectures. The exercises are used for team meetings. Implementations, simulation runs, etc. can be performed on computing facilities of the Computer Science 7 Group with commercial/academic simulation packages (e.g., AnyLogic/OMneT++/ns-3) in reserved computer hours. Possible projects encompass but are not restricted to: elevators, university canteen (Mensa), crossing with traffic lights, gas station, supermarket, hospital emergency reception, flexible manufacturing system, houses or neighborhood with renewable energy systems, battery powered devices, time sensitive networking e.g., in train communications, industrial communications. Own project ideas are possible and welcome.</p>	
6	Learning objectives and skills	<p>Students get</p> <ul style="list-style-type: none"> • hands-on experience in applying the theory of “Simulation and Modelling I” and in realizing simulation studies • skills in using professional (both commercial and/or academic) simulation software • skills in project and team work • training in simulation project management, presentations, documentation • knowledge of advanced topics in simulation such as variance reduction, distributed simulation, validation techniques 	
7	Prerequisites	Simulation and Modeling 1	
8	Integration into curriculum	in 2nd semester	
9	Module compatibility	Mandatory elective module in: <ul style="list-style-type: none"> • M.Sc. Data Science 	

10	Method of examination	<ul style="list-style-type: none"> • Oral exam (30 min.) • Written report, acquired by successful participation in the project and submission of a project report (about 20 pages).
11	Grading Procedure	<ul style="list-style-type: none"> • Oral exam (50%) • Written report (50%)
12	Module frequency	Summer semester (anually)
13	Workload	Workload: 225h distributed as: <ul style="list-style-type: none"> • Contact hours: 60h • Independent study: 165h
14	Module duration	One Semester
15	Teaching and examination language	English

12	Turnus des Angebots	jährlich im Sommersemester	
13	Arbeitsaufwand	<p>Workload: 300h davon:</p> <ul style="list-style-type: none"> • Vorlesung: 4 SWS x 15 Wochen = 60 h • Übung: 2 SWS x 15 Wochen = 30 h • Selbststudium: 210h 	
14	Dauer des Moduls	ein Semester	

15	Unterrichts- und Prüfungssprache	Deutsch
16	Literaturhinweise	<ul style="list-style-type: none">• C. Meusburger, Vorlesungsskript "Einführung in die Darstellungstheorie"• S. Sternberg, "Group Theory and Physics", CUP 1994• M. Artin, "Algebra", Pearson, 2011.

1	Modulbezeichnung	Kolloquiumsvorlesung Digitale Souveränität (KvDS)	5 ECTS
2	Lehrveranstaltungen	Vorlesung (4 SWS) (Anwesenheitspflicht bei den Vorträgen)	
3	Lehrende	Prof. Dr. Johannes Helbig, Prof. Dr. Georg Glasze johannes.helbig@fau.de , georg.glasze@fau.de	
4	Modulverantwortung	Prof. Dr. Johannes Helbig johannes.helbig@fau.de	
5	Inhalt	<p>Die Digitalisierung verändert unsere Welt, disruptiv, umfassend und unumkehrbar: Sie ändert die strukturellen Voraussetzungen für unsere Wirtschaft, unsere Gesellschaft und unser Verständnis von uns selbst. Digitale Souveränität adressiert die Frage, wie wir diesem Umbruch Gestaltung und Führung geben können, nach eigenem Willen und eigenen Wertvorstellungen. Das betrifft insbesondere die Freiheitlichkeit, die soziale Gerechtigkeit und die wirtschaftliche Leistungsfähigkeit der Gesellschafts- und Wirtschaftsordnungen der Zukunft.</p> <p>Viele Disziplinen müssen dazu beitragen, keine kann diese Aufgabe <i>innerhalb</i> des eigenen Horizonts lösen. Die Veranstaltung ist entsprechend in hohem Maße multidisziplinär. Sie richtet sich an fortgeschrittene Studierende aus mathematisch-naturwissenschaftlichen und technischen Studiengängen, aus Wirtschafts-, Sozial- und Rechtswissenschaften sowie aus Philosophie und Ethik. Die Veranstaltung ist als Ringvorlesung mit internen und externen Gästen konzipiert. Auf einen Kolloquiumsvortrag folgt jeweils ein diskursiver Abschnitt in Breakout-Gruppen. Themenschwerpunkte umfassen:</p> <ul style="list-style-type: none"> • Zukunft der Wertschöpfung und Wettbewerbsfähigkeit • Innere und äußere Sicherheit • Meinungsbildung und öffentlicher Raum • Konstruktive Anpassung des Rechtssystems • Zukunft der Arbeit und partizipative Nutzenverteilung • Strukturvoraussetzungen demokratischer politischer Prozesse und Systeme • Leistungsfähige Bildung • Trustworthy Artificial Intelligence • Souveräne digitale Infrastrukturen • Neue Narrative für die Basis gesellschaftlicher Solidarität • Menschenbild, Weltbild und ethische Reflexion <p>Die Veranstaltung wird ergänzt durch vertiefende Seminare zu ausgewählten Einzelthemen; diese können auch jeweils eigenständig belegt werden.</p>	
6	Lernziele und Kompetenzen	<p>Die Studierenden</p> <ul style="list-style-type: none"> • kennen die disruptiven Auswirkungen der Digitalisierung in unterschiedlichen Domänen • verstehen zugrundeliegende Veränderungen der strukturellen Voraussetzungen und ihre Wirkzusammenhänge und erkennen wiederkehrende Muster • können Handlungsfelder einschätzen und exemplarisch Maßnahmenansätze entwickeln und beurteilen • kennen Denkansätze, Begriffsbildungen und Paradigmen benachbarter Disziplinen und können sie im Dialog miteinander in Beziehung setzen • können eigenständig und im Team ein Teilthema eigenständig und vertiefend erschließen und Gestaltungsansätze entwickeln 	
7	Voraussetzungen für die Teilnahme		

8	Einpassung in Musterstudienpl	ab 1. Semester
9	Verwendbarkeit des Moduls	Wahlpflichtmodul in: <ul style="list-style-type: none"> • M.Sc. Data Science
10	Studien- und Prüfungsleistung	<ul style="list-style-type: none"> • schriftliche Abschlussarbeit (maximal 10 Seiten)

14	Dauer des Moduls	ein Semester
15	Unterrichts- und Prüfungssprache	Deutsch oder Englisch
16	Literaturhinweise	<ul style="list-style-type: none"> • L. C. Evans, Partial Differential Equations, AMS 1997 • D. Gilbarg, N. S. Trudinger, Elliptic Partial Differential Equations, Springer 1983 • E. DiBenedetto, Partial Differential Equations, Birkhäuser 2001 • E. Giusti, Direct methods in the calculus of variations. <i>World Scientific Publishing</i> 2003 • Vorlesungsskriptum

1	Modulbezeichnung	Wahrscheinlichkeitstheorie (WT)	10 ECTS
2	Lehrveranstaltungen	Vorlesung (4 SWS) Übung (2 SWS) Zentralübung (1 SWS)	
3	Lehrende	Prof. Dr. Torben Krüger tk@math.ku.dk	
4	Modulverantwortung	Prof. Dr. Torben Krüger tk@math.ku.dk	
5	Inhalt	<ul style="list-style-type: none"> • Mengensysteme, messbare Abbildungen, Maße, Integrationstheorie • Produkträume, unabhängige Zufallsvariablen und gekoppelte Experimente • Maße mit Dichten • Bedingte Erwartungen und Martingale • Stochastische Ungleichungen und Grenzwertsätze • Grundlagen stochastischer Prozesse <p>Die Präsentation des Stoffes erfolgt in Vorlesungsform online. Die weitere Aneignung der wesentlichen Begriffe und Techniken erfolgt durch Präsenzübungen.</p>	
6	Lernziele und Kompetenzen	<p>Die Studierenden</p> <ul style="list-style-type: none"> • erkennen und erklären die formale maßtheoretische Grundlage der Wahrscheinlichkeitstheorie und übertragen diese. • erfassen und formulieren zufällige Phänomene mit mathematisch komplexeren Strukturen. • nennen und erklären die wichtigsten stochastischen Prozesse, die in den Anwendungen eine Rolle spielen. • sammeln und bewerten relevante Informationen und erkennen Zusammenhänge zu anderen mathematischen Themenfeldern. • klassifizieren und lösen selbstständig Probleme analytisch. 	
7	Voraussetzungen für die Teilnahme	empfohlen: Stochastische Modellbildung und Grundlagen in Analysis	
8	Einpassung in Musterstudienplan	im 1. bis 3. Semester	
9	Verwendbarkeit des Moduls	<p>Wahlpflichtmodul in:</p> <ul style="list-style-type: none"> • M.Sc. Data Science • B.Sc. Mathematik • B.Sc. Wirtschaftsmathematik 	
10	Studien- und Prüfungsleistung	<ul style="list-style-type: none"> • Übungsleistungen (wöchentliche Hausaufgaben, unbenotet) • Klausur (benotet, 90 Min.) 	

11	Berechnung Modulnote	Klausur (100%)
12	Turnus des Angebots	jährlich im Sommersemester
13	Arbeitsaufwand	<p>Workload: 300h</p> <p>davon</p> <ul style="list-style-type: none"> • Vorlesung: 4 SWS x 15 = 60h • Übung: 2 SWS x 15 = 30h • Zentralübung: 1 SWS x 15 = 15h • Selbststudium: 195 h
14	Dauer des Moduls	ein Semester
15	Unterrichts- und Prüfungssprache	Deutsch
16	Literaturhinweise	<ul style="list-style-type: none"> • Bauer: Einführung in die Wahrscheinlichkeitstheorie • Breiman: Probability • Durrett: Probability • Klenke: Wahrscheinlichkeitstheorie
